Sales Performance Dashboard

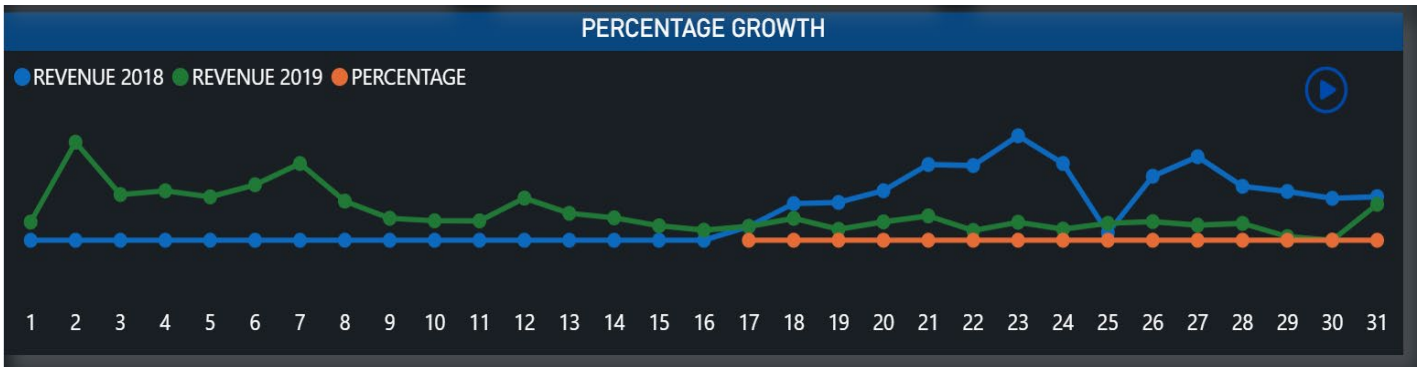

Data Analysis using Power BI

Larissa Krumel da Silva

Dashboard Overview

Key metrics and performance analysis

This dashboard highlights revenue trends, growth patterns, and individual salesperson performance.

Analysis Summary

Objective

Analyse sales performance to identify trends in revenue, growth patterns, and salesperson performance.

Tools

Power BI, Microsoft Excel

Process

- Collected and structured sales data
- Cleaned and validated data to ensure accuracy
- Created key performance metrics
- Built dashboards for data visualisation
- Analysed trends and performance patterns

Key Insights

- Revenue fluctuates over time, with noticeable peaks during specific periods
- Sales growth increases in later periods, indicating improved performance
- A small number of salespeople generate the majority of revenue
- Cancellation values remain low compared to total revenue

Business Value

- Provides visibility into sales performance and revenue trends
- Helps identify top-performing salespeople
- Supports data-driven decision-making
- Improves understanding of sales behaviour over time
